

ABOUT ME

I hold a Master of Engineering degree in Computer Science, specializing in Information Systems Engineering and Intelligent Systems. In my academic theses, I focused on multithreaded programming, parallel algorithms, and the scalability of evolutionary algorithms. I have several years of experience in IT support and IT infrastructure management.

I am interested in AI/ML, particularly generative AI and agentic AI. I have completed the "Skills of Tomorrow 2.0", "AIDEAS 4th Cohort" and "AIDEAS Level Up" programs.

I focus on integrating AI solutions with IT systems and process automation, while also improving my software development skills in Python, C#, and Java.

EDUCATIONS

02.2024 – 01.2026
Warsaw University of Life Sciences (WULS-SGGW)
Field of study: Computer Science, Intelligent Systems specialization
Degree: Master of Engineering (MEng)

Master's thesis titled "Investigation and Analysis of the Efficiency of Parallel Algorithms Used in Evolutionary Computation" was defended in January 2026. The aim of the thesis was to compare sequential and parallel models, as well as selection, crossover, and mutation methods in genetic algorithms, along with analyzing their scalability potential. The thesis was graded very good.

10.2019 – 11.2023
Warsaw University of Life Sciences (WULS-SGGW)
Field of study: Computer Science, Information Systems Engineering specialization
Degree: Bachelor of Engineering (BEng)

Engineering thesis titled "Evaluation of the Efficiency of Multithreaded Algorithms Using the Hopfield Network as a Case Study" was defended in November 2023. The thesis focused on the performance analysis of multithreaded algorithms, including methods of thread synchronization and data access in C#. The thesis was graded very good.

WORK EXPERIENCES

07.2019 – present
IT Specialist
AP System

I am responsible for comprehensive IT support and management within an SME operating in the eco-friendly solutions sector. My responsibilities include the selection, configuration, and maintenance of IT infrastructure (including computer hardware and mobile devices), ongoing maintenance and service tasks, technical user support, software management, and ensuring IT system security.

SKILLS

- Analytical and critical thinking
- Independence, diligence and attention to detail
- Adaptability and fast learning
- Communication and teamwork
- Agentic AI – process automation, RAG systems
- Generative AI – prompt engineering, content generation
- Python, C#, Java, SQL, JavaScript
- .NET, ASP.NET, WPF, Spring, Spring Boot, Hibernate, REST
- HTML, CSS, Bootstrap, jQuery
- Git, TDD, design patterns, multithreading
- Agile and Scrum methodologies

LANGUAGES

- Polish – native
- English – advanced

SITES AND SOCIAL LINKS

- Profil LinkedIn:
<https://www.linkedin.com/in/michal-pamieta/>
- Profil GitHub:
<https://github.com/MichalPamieta>

INTERESTS

- New technologies (AI applications and computer hardware)
- Strategy games
- Science fiction and fantasy literature
- History
- Recreational scuba diving

COURSES AND CERTIFICATES

05.2026 – 06.2026

AIDEAS Level Up

Accenture | University of Lodz | Generator Pomysłów

A five-week course focused on the design, testing, and security of AI agent systems. The program combined self-paced learning (2 weeks) with team-based work (3 weeks). The training covered AI agent architectures, decision-making frameworks, vulnerability identification and attack vectors, security controls and validation mechanisms, agent resilience testing, and post-incident analysis. The team-based component involved solving real-world business challenges and evaluating agent robustness in a simulated attack environment.

03.2026 – 04.2026

AIDEAS 4th Cohort – AI Competence Development Program

European Institute of Innovation & Technology (EIT Deep Tech Talent Initiative) | Wrocław University of Science and Technology | Generator Pomysłów

A seven-week course focused on the practical application of artificial intelligence in designing business solutions. The course combined individual work (3 weeks) with team-based work (4 weeks). The individual part covered the fundamentals and applications of AI (including generative AI), legal and ethical aspects (AI Act, GDPR), content creation tools, prompting techniques, data quality and anonymization, as well as AI agent design and Proof of Concept development. During the team-based part, participants worked on a real business challenge, designing a multi-agent system for Keller Polska that automated the analysis of tender documentation, matched geotechnical works with the company's technologies, and generated reports for the bidding department.

09.2025 – 10.2025

Google Skills of Tomorrow 2.0 – Using AI in Business Development Program

Google | SGH Warsaw School of Economics

A five-week training program focused on the practical use of artificial intelligence in work and business development. The course consisted of five modules covering the application of generative AI, selecting and combining AI tools, prompting techniques, content creation, process automation using AI assistants and agents (including n8n), data analysis (Google BigQuery, SQL), as well as AI strategy and implementation in organizations.

05.2019 – 07.2019

Java Developer: Web

Coders Lab

An on-site, eight-week Java course focused on web application development. The training covered working with the Git version control system, the basics of HTML and CSS, object-oriented programming in Java, SQL, and web technologies (Servlets, JSP, JavaScript, jQuery). The program also included Spring and Hibernate topics (MVC, JPA, JPQL, validation), application testing (JUnit, TDD), and working within the SCRUM methodology.

06.2018

Cambridge English Level 1 Certificate in ESOL International (First)

Cambridge Assessment English

A certificate confirming English language proficiency at the B2 level.

PROJECTS

[Business process automation for Keller Polska](#)

As part of a team project completed during the AIDEAS 4 Cohort, a multi-agent system was developed to automate the analysis of tender documentation, match geotechnical works with company technologies, and generate reports for the sales/proposal department. The use of AI reduced report preparation time by over 70%, while maintaining at least 95% accuracy in identifying works, at least 90% accuracy in technology assignment, and at least 95% completeness of the analysis. The project was featured on the AIDEAS 4th Cohort website (geotechnical industry, Team #3): <https://projekty.aideas.generatorpomyslow.pl/4-kohorta>.

I consent to the processing of my personal data for the purposes of current and future recruitment processes in accordance with the GDPR.
